CLEARANCE LINES EDITING TOOL

This tool allows you to change all the clearance lines in an existing profile project file.

1. run GLEdit.exe
2. select the project files (one at a time) by clicking *Browse* and locating each file.
3. To delete a file from the list double click on it
4. After you have selected all files enter the new clearance lines in the text box, separated by a semicolon eg 15.5;18
5. click *Process*

You will see a message as each file is processed.

A backup copy of all files is made in a directory named copy inside the directory containing each source file.
